About this guide

This guide is intended for users who are creating and processing Kofax ReadSoft PROCESS DIRECTOR™ documents in the ReadSoft Web Application. A separate guide is available for users of the ReadSoft Web Application SAP user interface.

Note: ReadSoft PROCESS DIRECTOR can be configured to meet individual customer requirements. This guide describes a typical ReadSoft PROCESS DIRECTOR installation and therefore the descriptions may not correspond exactly with your installation. Some features may not be available for all process types, and your user rights may restrict which features you are allowed to use.

About ReadSoft PROCESS DIRECTOR

ReadSoft PROCESS DIRECTOR is an application running in SAP that can create, receive and process different types of business documents in SAP. It can also be accessed via a web browser interface (the ReadSoft PROCESS DIRECTOR Web Application).

ReadSoft PROCESS DIRECTOR improves your ability to optimize document-driven or request-driven processes in SAP. Document-driven processes are initiated by the need to process existing documents, usually from external sources. Examples of such documents are delivery notes, sales orders, remittance advices, etc. Request-driven processes are initiated by the need to process requests for action, usually from internal sources. Examples of such requests are purchase requisitions, changes to master data, corrections to FI postings, etc.

ReadSoft PROCESS DIRECTOR offers the following standard process types:

- [Accounts Payable](#)
- [Accounts Receivable](#)
- [Archiving](#)
- [Asset Acquisition](#)
- [Asset Retirement](#)
- [Asset Transfer](#)
- [Customer Orders](#)
- [Electronic Bank Statements](#)
- [Financial Postings](#)
- [Goods Receipts](#)
- [Invoice Block and Cancellation](#)
- [Master Data Maintenance](#)
- [Order Confirmations](#)
- [Payment Approvals](#)
- [Requisitions](#)

In addition, customers can configure their own process types.

Getting started

This chapter explains how to start ReadSoft PROCESS DIRECTOR and provides information about the user interface.

Start ReadSoft PROCESS DIRECTOR

To start ReadSoft PROCESS DIRECTOR, complete the following steps.

1. In a web browser, enter the PROCESS DIRECTOR address (URL) that is supplied by your system administrator. It may look similar to the following address:
http://your.intranet:8080/pdweb-app/init.do.

2. In the logon screen, enter your user name and password. These are supplied by your system administrator. If you already have an SAP user name and password, you can log on with these.

Note: Depending on the configuration of your system, you may be logged on automatically with your Windows user name and password.

3. If your system has been configured to use more than one language, from the **Language** selection list, select the language of the user interface. **Default** means that the standard PROCESS DIRECTOR language will be used, and **Browser** means that the language setting of your web browser will be used.
4. Click **Log on**.

The PROCESS DIRECTOR start page is displayed.

The start page displays the [Worklist](#) and a Quick Start menu, or a [selection screen](#), if these have been configured. The Quick Start menu provides rapid access to frequently used [document lists](#) and actions, and to your [user profile](#). Which options are available in this menu depends on your system configuration. If no Quick Start menu is provided, you must click a [Worklist category](#) to display and work with documents. If a selection screen is displayed, you must enter selection criteria.

Worklist

The Worklist is a navigation area that allows you to quickly view different categories of documents. The illustration here shows a sample ReadSoft PROCESS DIRECTOR installation; the categories in your installation may have different names and there may be more or fewer categories, depending on your configuration and user rights.

The **User profile** category enables you to change your [personal settings](#).

1. Refresh the Worklist.
2. Display the [start page](#).
3. Hide the Worklist.
4. Display the Worklist in a floating window.
5. Display the Worklist.
6. Expand and collapse Worklist categories to show or hide subcategories.
7. Currently selected Worklist category.
8. Resize the Worklist.

Move the mouse over the right hand edge of the Worklist area until the cursor changes into a double-sided arrow, then click and drag to the desired size.

9. Number of documents currently displayed in the Worklist category / Total number of documents available in this category.

These numbers will differ, for example, if you have [filtered](#) the Worklist, or your administrator has set a limit on the number of documents that are displayed in this category.

Note that the number of documents in a Worklist category may or may not represent the sum of the number of documents in its subcategories, depending on how the Worklist is configured and on your user rights.

10. Click  to open the [selection screen](#) to filter the Worklist.

If your system has been configured to access more than one SAP system, the Worklist will be sorted either by SAP system then process type, or by process type then SAP system.

- Worklist sorted by SAP system

Worklist		Goods Receipt - Not posted (24)

Worklist selection screen

You can use the Worklist selection screen to filter Worklist categories to display only documents that meet specific criteria. For example, you can filter a Worklist category to display only documents for a specific company or vendor, or only documents created within a specific time period. The filter criteria that are available are set by your system administrator. Different filter criteria may be available for different Worklist categories.

Add a filter

To add a filter, complete the following steps.

1. In the Worklist, click **Define selection criteria**  next to the Worklist category that you want to filter.
2. Enter your filter criteria.

Goods Receipt - My Goods Receipts - Filtering criteria		
Current processor		to
Reference		to
Company Code		to
Vendor		to
PD document number		to
Created on		to
Creator user		to
Max. number of hits	50	
✓ Search ↶ Reset ✕ Cancel		

The **Max. number of hits** field enables you specify the maximum number of documents that should be displayed in the document overview list.

3. Click **Search** to apply the filter.

Two numbers are displayed in the Worklist for the node: the first is the number of documents that match your selection criteria, and the second is the specified maximum number of hits. The document overview list displays only the documents that meet your search criteria.

Tip: In your personal settings you can specify that the selection screen filter dialog box is displayed automatically, either when you start ReadSoft PROCESS DIRECTOR or when you double-click on a Worklist category.

Remove a filter

To remove a filter, complete the following step.

- In the Worklist, click **Define selection criteria**  and click first **Reset** then **Search**.

Start-up selection screen

If your system has been configured accordingly, a selection screen is displayed instead of the Worklist when you start ReadSoft PROCESS DIRECTOR. You must first enter search criteria and execute the search. The Worklist then displays only documents that correspond to the entered search criteria.

The selection screen lists all the available process types. Select the corresponding check boxes for the process types you want displayed in the Worklist. Clicking a highlighted process type allows you to enter criteria for filtering that process type.

Selecting the **All** check box displays all the documents.

Selection screen for all the different process types

Enter your search criteria and click **Search**.

Document overview list

When you click a category in the [Worklist](#), ReadSoft PROCESS DIRECTOR displays a list of all documents in that category.

1. Click the PROCESS DIRECTOR document number to open the [document detail view](#).
The number of the last document viewed or edited is displayed in bold text.
2. To sort the document overview list, click on a column heading once to sort in ascending order and click again on the heading to sort in descending order. The icon indicates whether the list is sorted in ascending or descending order.
3. Click a column heading to filter the list by this column, or to sort by this column in ascending or descending order. Parentheses [] in a column heading indicate that the list is sorted by this column.
4. Hide the Worklist.
5. Hide the document list.
6. Display the Worklist.
7. Title bar.
8. Actions bar.
9. Checkboxes for multiple document selection.

Select one or more documents, then click the appropriate action on the Actions bar. Select the checkbox in the column heading to select all documents.

Note: Some actions may not be possible for multiple documents.

10. PROCESS DIRECTOR documents.

The currently selected document is highlighted.

11. Paging controls:

-  Forward one page
-  Forward to the last page
-  Back one page
-  Back to first page

 Select the number of documents to display on the page.

You can also use the PAGE UP and PAGE DOWN keys to move to the previous and next page.

Document detail view

The document detail view is where you create, edit and view document information. To open this view, click a PROCESS DIRECTOR document number in the [document overview list](#) (in the **PD doc. no.** column) or click **Create** to create a new document.

1. Display the Worklist.
2. Display the document list.
3. The **Additional information** area. What is displayed here depends on which button you click:

Attachments 

Notes 

Messages 

Audit trail 

If attachments or notes are present in the document, the icon has a green border .

Note: Depending on the configuration, notes may be displayed in a table instead of in the **Additional information** area.

4. Title bar with arrows for browsing to the previous/next documents.
5. Actions bar.
6. Hidden data pane. To hide a pane of data, click on the small arrow to the left of the data pane name. To display the pane again, click this button.
7. Header data, divided into panes.

Note: Depending on the configuration, the header data may be displayed in tabs instead of data panes. Also, when there are multiple text area fields in the header, you can configure to display them as single line input fields, which when you click, display the regular size text area (in a popup).

8. Arrows for browsing through the data panes.
9. Line items Actions bar.
10. Line items.
11. Additional tables, such as **Accounts** or **Purchase order items**.

Use search help

Some fields have search help available to assist you in finding the right value. When you click in a field for which search help is available, the search help icon  is displayed.

The screenshot shows a web application interface with a header section titled "Vendor" (indicated by a checkbox). Below the header, there are two input fields. The first field is labeled "Vendor" and contains a search help icon (a question mark inside a square). The second field is labeled "Payment terms" and contains the value "ZB01".

Click search help  to open a dialog box in which you can enter search criteria. Use the selection list **Search help** to display different search fields. For example, if you select the option **Vendors by Country** in this selection list, fields in which you can search by country are displayed.

Search help for field Vendor

	From	To
Search term		
Postal Code		
City	Frankfurt am Main	
Name		
Vendor		
Results	10 	
Search help	Vendors (General) 	

Search Reset Cancel

When you click **Search**, the search results are displayed. You can now enter more search criteria to narrow down your search or make a selection in the results list. To clear all search fields, click **Reset**.

Search help for field Vendor

	From	To
Search term		
Postal Code		
City	Frankfurt am Main	
Name		
Vendor		
Results	10 	
Search help	Vendors (General) 	

Search Reset Cancel

	Search term	Postal Code	City	Name	Vendor
☐	CHEMIE	60594	FRANKFURT AM MAIN	READSOFT EBYDOS AG	1060
☐	LASALLE	60329	FRANKFURT AM MAIN	JONES LANG LASALLE GMBH	2600
☐	RE	60343	FRANKFURT AM MAIN	MEYERS REAL ESTATE AG	3458
☐	RE	60343	FRANKFURT AM MAIN	MEYERS REAL ESTATE AG	4256
☐	RE	60345	FRANKFURT AM MAIN	POLIS IMMOBILIEN FUEHRER	4257
☐	RE	61655	FRANKFURT AM MAIN	HOFFMANN IMMOBILIEN AG	4258

When you select an item in the results list, the search help dialog closes and the selected value is entered in the field.

A dialog box titled "Vendor" with a search result for Vendor 1000, C.E.B. BERLIN. The Payment terms field is set to ZB01.

Vendor	1000	C.E.B. BERLIN
Payment terms	ZB01	

Add the search result to multiple lines

If several lines need the same value entered in a particular field, select those lines and click the search help icon on that field in any of those lines. The other lines will also automatically get filled with the selected value. To select all the lines, you can select the check box on the header, instead of individually selecting each line.

A table titled "Accounts (3)" with columns: Template, Quantity, Percent, and G/L Acct. The first three rows are selected, and the G/L Acct field for the first row is highlighted with a search help icon.

☒	Template	Quantity	Percent	G/L Acct
☒		1.000	0.0	10103100 ?
☒		0.000	0.0	10103100
☒		0.000	0.0	10103100

Use the calendar

Fields in which dates can be entered display the calendar button.

A field labeled "Delivery date" with a calendar icon button next to it.

Click the calendar button and select the date in the calendar. The selected date is entered in the field.

A calendar dialog box titled "Select date" showing the month of February 2011. The date 22 is selected. The dialog box is open over a form with fields for Delivery date, Currency amount, and Currency.

Delivery date	
Currency amount	
Currency	

Items (2)

+ New line * Delete + Account

Use text field suggestions

Some text fields provide a suggestion list with the values that you previously entered. When you start typing in such a field, the suggestion list is automatically displayed.

- Select **Edit suggestions** to open a popup, in which you can modify or reset (delete) the current suggestion list.

- Select **Clear suggestions** to clear the list of suggestions for this field.

Document status icons

Note: The specific meaning of the document status may vary slightly depending on the process type. Move the mouse cursor over an icon in the document overview list to display a tooltip with the exact status description. Note that some statuses do not apply to all process types.

Icon	Status	Description
	New	The document has been created.
	Error	The document contains errors that prevent it from being posted.
	Warning	The document contains errors that do not prevent it from being posted.
	Ready for posting	The document does not contain any errors and can be posted to SAP.
	In workflow	The document is currently in a workflow .
	Posted	The document has been posted. Note: Posted documents cannot be changed.
	Canceled	The document has been canceled. Canceled documents can no longer be edited.

Icon	Status	Description
	Rejected	The document has been rejected.
	Reversed	The document has been reversed. Reversed documents cannot be edited.

Workflow status icons

Icon	Status	Description
	Sent	The document has been sent to a workflow, but the recipient has not yet opened the document. This status is applied to all workflow steps. For example, when the first step has been approved, the Sent status is displayed when the recipient of the second step has not yet opened the document.
	In work	The document is currently in a workflow and the recipient has opened the document. This status is applied to all workflow steps. For example, when the first step has been approved, the In work status is displayed when the recipient of the second step has also opened the document.
	In workflow, the current processor is a substitute	The document is currently in a workflow. The current processor is processing the document in his capacity as substitute for the original processor.
	Overdue	The workflow or workflow step is overdue. The due date for processing is set in the workflow or workflow step settings.
	Approved	The document has been approved and is no longer in a workflow.
	Rejected	The document has been rejected and is no longer in a workflow.
	Partially approved	Some document items have been approved, others have been rejected. The document is no longer in a workflow.
	Recalled	The document has been recalled from a workflow. The workflow has been cancelled.
	Forwarded	The document has been forwarded to another user for processing.
	Query sent	A query about the document has been sent to another user.
	Query	A query about the document has been received from the workflow processor.
	Query answered (status for query sender)	A query has been answered. This status icon is displayed to the user who sent the query.

Icon	Status	Description
	Query answered (status for query recipient)	A query has been answered. This status is displayed to the person who received the query.

System messages

System messages are generated automatically by the system, for example, when you [check](#) or [post](#) a document or [send a document to a workflow](#). System messages communicate the history of a document, including actions such as check and post, status changes, ownership changes, errors, and more. System messages include both actions taken by the system and actions taken by users. Based on these messages, you can make any necessary changes to the document before it is sent to a workflow or posted to SAP.

When system messages have been generated for a document, these messages are displayed next to the header data in the [document detail](#) view. Messages are displayed in chronological order, with the latest messages at the top of the list.

Each message line is a summary of the action or event. To view the individual messages for each action in the **Events** pane, select the **Action**.

Actions (13)

Action	Date	Time	User	Result
Insert document into database	05/13/2013	14:47:44	Barbara Jones (JONES)	✓
Go to display mode	05/13/2013	14:47:28	Barbara Jones (JONES)	▲
Create document	05/13/2013	14:47:23	Barbara Jones (JONES)	✓
Switch Worklist node	07/22/2013	14:01:20	Barbara Jones (JONES)	▲
Check before post *change mode	08/02/2013	12:53:46	Barbara Jones (JONES)	■
To display mode	08/01/2013	12:07:14	Barbara Jones (JONES)	▲
Switch Worklist node	07/22/2013	14:01:20	Barbara Jones (JONES)	▲

Events (3)

Result	Event	Message
■	Perform checks	Please enter items first
■	Perform checks	Document contains no items
▲	Perform checks	Purchase order date is in the past

The colored icons indicate whether the action that resulted in the message was successful or not:

-  The action resulted in errors. Documents with errors cannot be posted to SAP.
-  The action resulted in warnings. Documents with warnings can be posted.
-  The action was successful.

To view current messages, click the **Messages**  button on the **Additional information** area.

Create and edit documents

This topic briefly explains how to create, copy, edit and delete documents. Detailed information on creating and editing documents for specific process types can be found in the chapter for the relevant process type.

Create a document

To create a document, complete the following step.

- In the [document list](#), on the **Actions** bar, click **Create**.

Create a document from an external file

If configured, you can create new PROCESS DIRECTOR documents by uploading data from an external file. Both header and line item data can be uploaded.

The following external file formats are supported:

- ASC
- CVS
- TAB
- TXT
- XLS

Note: The system may be configured to upload only line items that fulfil certain conditions.

To create a document from an external file, complete the following steps.

- Click **File upload from list**.
- In the **Choose file upload ID** dialog box, upload an external file.

- Click **Continue**.

Edit a document

Note: You cannot edit documents that have been posted, that are assigned to a different user in a workflow, or that are currently being edited by another user.

To edit a document, complete the following step.

- In the [document overview list](#), click the PROCESS DIRECTOR document number (**PD doc. no.**) to open the document detail view.

Upload line items from an external file

If configured, you can create new line items by uploading data from an external file.

The following are the supported formats for the external files:

- ASC
- CVS
- TAB
- TXT
- XLS

It is also possible to define conditions for each logical level: a data line in the file will be considered valid only if the conditions are fulfilled.

To upload line items from an external file, complete the following steps.

1. Click **File upload from list**.
2. In the **Choose file upload ID** dialog box, upload an external file.

3. Click **Continue**.

Entry templates

About entry templates

If entry templates have been configured in your system, you can use these templates to speed up data entry. Entry templates contain pre-defined fields, such as the vendor, material group, plant, etc. When you select an entry template, these predefined fields are automatically filled with the values defined in the template.

System templates are created and maintained centrally and are available to all users. If entry template maintenance has been configured, you can also create your own templates for your personal use. You cannot specify which fields are defined in the template, but you can add your own values to the template fields.

Use an existing entry template

If entry templates have been configured in the system, a **Template** field is displayed. The example below shows a template field for line items. Templates may be also be available for other types of data (header data, account assignments, partners, etc.).

To use an existing entry template, complete the following steps.

1. Enter the name of the template or use [search help](#) to select a template.

Search help for field Entry template

From To

Entry template

Material Group

Plant

Vendor

Results 10 ▾

Search Reset Cancel

	Entry template	Material Group	Plant	Vendor
☐	ALL1	00107	1000	2500
☐	ANOTHER_AL	00108	1000	1060
☐	TEST1	00107	1000	2800

2. Click ☐ next to a template to add the values defined in the template to the relevant fields of your document.

Create and edit entry templates

If entry template maintenance has been configured in the system, a **Maintain entry templates** button is displayed on the appropriate **Actions** bar (in this example, the line items **Actions** bar).

To create and edit entry templates, complete the following steps.

1. Click **Maintain entry templates**.
2. Click **New line** to create a new template.

3. Enter a name for the template and enter the values in the template fields.

☐ Template	Matl group	Vendor	Plant
☐ SAMPLE1	00104	222	
☐ SAMPLE2	?		

To delete a template, select the check box to its left and click **Delete**. Select the check box at the top of the list to select all templates.

4. Click **Save** to save your changes.

Copy a document

If you often order a similar set of items with similar accounting information, copying an existing document with these items will save you time.

To copy a document, complete the following steps.

1. To open the document details, in the [document overview list](#), click the document number.
2. On the **Actions** bar, click **Copy**.

A new document containing the same information as the copied document opens.

3. Make any necessary changes and save the document.

Note: Depending on your system configuration, texts from the original document may also be copied. The configuration also determines which fields are copied.

Delete a document

The system configuration determines under which circumstances you can delete documents, or if you are allowed to delete documents at all. For example, it may not be possible to delete posted documents, or documents that are currently being processed by another user.

To delete a document, complete the following steps.

1. To open the document details, in the [document overview list](#), click the document number.
2. On the **Actions** bar, click **Delete**.
3. Click **Yes** to confirm the deletion.

Split documents

If configured in your system, you can split a single document into several documents. The document is split based on the values of specific fields, which are defined in the configuration. When you split a document, line items are copied into new documents and removed from the original document. Items that meet the first condition specified in the configuration remain in the original document; items that meet further conditions, or meet no condition, are moved into new documents. The header data is copied into the new documents.

To split a document, complete the following steps.

1. In the [Worklist](#), click the appropriate category.
2. To open the document details, in the [document overview list](#), click the document number.
3. Click **Split document**.
4. In the **Split document** popup, click **Yes**.
5. The **Messages** pane displays the numbers of the original document that was split and the new document(s) created according to the specified configuration parameters.

You can now work on either document.

Notes, texts and attachments

You can supplement the information contained in your PROCESS DIRECTOR documents using notes, texts and attachments.

- [Notes](#) are used only for communication within ReadSoft PROCESS DIRECTOR and are not transferred to the SAP document.
- [Texts](#) are transferred to the corresponding SAP document when the document is posted in SAP.
- [Attachments](#) enable you to make information contained within external files directly available in ReadSoft PROCESS DIRECTOR.

Add and view notes

You can add notes to documents to communicate with other ReadSoft PROCESS DIRECTOR users, for example, to communicate problems, ask questions or provide information. Notes are used only for communication within ReadSoft PROCESS DIRECTOR and are not transferred to the SAP document, but are archived separately in a PDF file when the SAP document is posted. Notes are displayed in chronological order (newest first).

Tip: If you want to receive an answer to a question, write your question in a note and then [send a query](#).

To view or add notes, complete the following steps.

1. Click the document number in the [document list](#) to open the document details.
2. Click the **Notes**  button in the **Additional information** area. If notes have been added to the document, the **Notes** button has a green border.

Note: Depending on the configuration, notes may be displayed in a table instead of in the **Additional information** area.

3. To add a new note, click **New line** and add the desired text in the text box.

The image shows a 'Notes (1)' dialog box with a close button (X) in the top right corner. Below the title bar, there are two buttons: '+ New line' and '* Delete'. Below these buttons is a table with three columns: 'Creator user', 'Created on', and 'Time created'. The first row of the table is highlighted in orange and contains the text 'Barbara Jones', '07/24/2013', and '10:09:15'. Below the table is a large text box for adding a new note.

☐	Creator user	Created on	Time created
☒	Barbara Jones	07/24/2013	10:09:15

To delete a note, select it and click **Delete**. You can only delete or edit notes if you have not yet saved the document. Click the check box at the top of the list to select all the notes.

4. Save the document.

Note: Notes can also be added to read-only documents (when the user is not the current workflow processor).

Add and view texts

For some process types, you can add additional informational texts to the header data or to individual line items of your document. Texts are transferred to the corresponding SAP document when the document is posted in SAP.

To add and view texts, complete the following steps.

Add text to header data

To add text to header data, complete the following steps.

1. Click the document number in the [document overview list](#) to open the document details.
2. Select the **Texts** header data pane.

The screenshot shows a web application interface for managing texts. At the top, there's a section titled 'Texts (0)' with a checkbox. Below it are two buttons: '+ New line' and '* Delete'. A table follows with three columns: 'Text ID', 'Last modified by', and 'Textlines'. The table contains two rows. The first row has a checked checkbox, 'Header text' in the 'Text ID' column, 'Barbara Jones' in the 'Last modified by' column, and 'Add some text' in the 'Textlines' column. The second row has an unchecked checkbox, 'Terms of delivery' in the 'Text ID' column, 'Barbara Jones' in the 'Last modified by' column, and 'Add some text' in the 'Textlines' column. A dropdown menu is open for the 'Terms of delivery' row, showing 'Header text' and 'Terms of delivery' as options. Below the dropdown is a 'Please select' button.

3. Click **New line**.
4. Select a **Text ID** to indicate what the text refers to. All the text IDs that are available in your SAP system can be selected here.
5. Enter text in the **Textlines** text box and click **OK**.

To delete a text, select the check box to the left of the text and click **Delete**. Select the check box at the top of the list to select all the texts.

Add text to line items

To add text to line items, complete the following steps.

1. In the line items area, select the item and click **Texts**.

An additional pane appears below the line item where you can enter texts. Click the arrow  in the **Texts** pane to close this area when you have finished entering the texts.

The screenshot shows the 'Items (2)' pane with a table of line items. The first item, 'Sample item 1' (00010), is selected. Below it, the 'Texts (1)' pane is expanded, showing a table with columns 'Text object', 'Text ID', 'Modified by', and 'Texts'. The first row shows 'EBAN', 'B04', 'Barbara Jones', and 'Add some text'. Below this table are two options: 'Purchase requisition texts (EBAN)' and 'Purchasing doc. item texts (EKPO)'. The second item, 'Sample item 2' (00020), is also visible below.

2. Click **New line**.
3. Select a **Text object** to specify in which SAP document type the text will be displayed, and a **Text ID** to indicate what the text refers to. All the text IDs that are available in your SAP system can be selected here.
4. Enter the text in the **Textlines** text box and click **OK**.

To delete a text, select the check box to the left of the text and click **Delete**. Select the check box at the top of the list to select all the texts.

Add and view attachments

You can attach files to documents to provide additional information. Which types of files you can attach depends on your system configuration.

Add attachments

To add attachments, complete the following steps.

1. Click the document number in the [document overview list](#) to open the document details.
2. Click the **Attachments** icon in the **Additional information** area.

- Click **Upload**. Depending on the system configuration, the popup displays the allowed document types or a selection list. If necessary, select a document type. Enter the path and file name or click **Browse** to find the file that you want to attach.

Note: Instead of browsing for the file that you want to upload, you can also drag and drop it into the **Attachments** pane.

In SAP versions ECC600 and higher, you can also enter a description for the attachment.

- Click **Upload**.

View attachments

You can view attachments in the **Attachments** pane. To open the **Attachments** pane, complete the following step.

- Click the **Attachments**  button.

If attachments have been added to the document, the **Attachments** button has a green border .

☐	Type	Description	Size	Date ↑	Ti
☐		PROCESS DIRECTOR not...	21.489	20.04.2016	1
☐		PROCESS DIRECTOR not...	21.630	20.04.2016	1
☐		FoxyDaumenRundAusges...	54.773	27.06.2016	1
☐		ALTMP_DR6_4.PDF	21.364	07.07.2016	1

Some documents, such as images, are displayed directly in the document viewer. Others, such as Microsoft Office documents, must be opened in the application with which they were created.

Display options for PDFs

For PDFs, the document viewer provides the following display options.

- **Zoom out**  and **Zoom in**  reduce or enlarge the PDF. The text box next to the buttons displays the current zoom level.
- **Maximize**  fits the full page into the document viewer.
- With **Drag** , you can drag the PDF within the document viewer.

Display options for images

For images, the document viewer provides the following display options.

- **Zoom out**  and **Zoom in**  reduce or enlarge the image. To display the next available zoom level, move the pointer over the corresponding button. To display the current zoom level, move the pointer over the image itself.
- **Maximize**  displays the complete image in a separate popup.
- If scroll bars are available, you can drag the image within the document viewer by left-clicking the image and holding down the mouse button.

For some process types, attachments may be available at line item level. In this case, the **Attachments**  button is displayed in the line item.

Add scanned paper attachments

If your system has been configured accordingly, you may be able to attach scanned paper documents to a PROCESS DIRECTOR document to make them available in electronic form. Note that this function is not available for all document types and requires a central scanning facility with scanning software installed.

To attach scanned paper documents, complete the following steps.

1. Create the document and fill in all fields.
2. Save the document.
3. To return to the document list, click **Back**.
4. Open the document and click the **Attachments** tab.
5. **Open** the cover sheet attachment and print it.
6. Take the printed cover sheet together with the paper document to your scanning department.

After scanning, the scanned paper document will be available in the **Attachments** tab.

Delete attachments

The configuration and your user rights determine which type of attachments you can delete.

To delete attachments, complete the following steps.

1. In the [document list](#), click the document number to open the document details.
2. In the **Additional information** area, click the **Attachments**  button.
3. Select the attachment(s) you want to delete and click **Delete attachments**.

4. Click **Yes** to confirm the deletion.

Check and post documents

This chapter explains how to post documents to SAP and how to check documents to ensure that all information that is required for posting has been entered correctly. ReadSoft PROCESS DIRECTOR performs all standard SAP checks before posting documents; your system may perform other additional checks as well.

Check a document

ReadSoft PROCESS DIRECTOR automatically runs checks on a document when it is posted, but you can also run these checks manually before posting.

To check a document, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Check**.

ReadSoft PROCESS DIRECTOR performs a series of check actions, which assess the correctness and completeness of the document data to determine whether a corresponding document can be created in the SAP system.

ReadSoft PROCESS DIRECTOR generates messages when it checks the document. These messages communicate any errors or warnings that may arise and also inform you of successful events. Based on these messages, you can make any necessary changes to the document before it is posted. See [System messages](#) for more information.

If the checks determine that a document is free from error, **No error found during check** is displayed. The document status changes to  which indicates that there are no errors and the document can be posted.

Reject a document

Depending on your system configuration, you may be able to reject documents that have not yet been posted.

Note: This is not the same as [rejecting a document in workflow](#).

To reject a document, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Reject**.
3. Depending on the system configuration, you may need to add a [note](#) or specify a rejection reason.

A dialog box titled "Rejection reason" with a close button (X) in the top right corner. It contains a label "Rejection Reason" next to a dropdown menu. The dropdown menu is open, showing three options: "Please select" (highlighted in blue), "Rejected due to credit check", and "Cust to receive replacement". At the bottom of the dialog box, there are two buttons: "Continue" with a checkmark icon and "Cancel" with an X icon.

4. Confirm the deletion.

The document status changes to  **Rejected**.

Display rejected documents in the workflow history (PD AP only)

The **Workflow History** category displays those documents that have already been processed. For incoming invoices, you can configure that the workflow history also includes the documents that have been rejected.

To display rejected documents, complete the following steps.

1. In the [Worklist](#), select the **Incoming Invoices > Workflow History** category.
2. In the **Incoming Invoice - Workflow History - Filtering criteria** window, clear the **Display approvals only** check box.
3. Click **Search**.

The document list is updated with the rejected documents.

Post a document

Posting a document creates a corresponding document in SAP based on the current PROCESS DIRECTOR document. Before posting, ReadSoft PROCESS DIRECTOR [performs checks](#) to determine whether an SAP document can be created based on the information in the PROCESS DIRECTOR document.

You can post a document when it has the following statuses:

 Contains warnings, can be posted

 No errors, can be posted

To post a document, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Post**.

The status changes to **Posted**  and the SAP document number now appears in the PROCESS DIRECTOR document. Depending on your configuration, an email may be sent to the person who created the document to inform them that it has been posted.

Messages				
	No error found during check			
	Standard PO created under the number 4500016413			

☐	Status	Wf status	PD doc no ↓	Purch.Doc.	Purch.req.
☐			689	4500016413	

If errors occurred and the document could not be posted, ReadSoft PROCESS DIRECTOR displays corresponding messages so that you can identify and correct the error. See [System messages](#) for more information.

Link a document to an existing SAP document

Instead of posting a PROCESS DIRECTOR document to SAP, you can link an unposted PROCESS DIRECTOR document to an existing SAP document.

To link to an existing SAP document, complete the following steps.

1. To open the document details, in the [document overview list](#), click the document number.
2. Click **Connect to existing PO** (for requisitions) or **Connect to SAP doc.** (for financial postings).

A dialog box is displayed in which you can enter the SAP document number. Which fields appear in this dialog box depends on the process type.

Basic data	
Document status	☐ Postable
Workflow status	☒
PD document number	240
Document date	05/16/2011
Delivery date	05/25/2011
Amount	1,254.00
Currency	EUR

3. Click **Connect to existing PO** (for requisitions) or **Connect to SAP doc.** (for financial postings).

Reverse a document

To reverse a document after it has been posted, complete the following steps.

1. To open the document details, in the [document overview list](#), click the document number.
2. Click **Reverse**.
3. Specify the reversal reason and date.

The document status changes to **Reversed** .

About workflows

Workflows send documents electronically to other people in order to obtain or provide additional information, clarification and approval. Every action in the workflow is logged, making it possible to identify who is working on the document at all times. [Status icons](#) make it easy to identify the status of a document in a workflow.

Note: Workflows can only be used if you have a workflow license.

Start a workflow

You can configure the number of steps within a workflow, as well as the number of recipients per step. Depending on whether you are starting a one-step or multi-step workflow, you need to complete different steps.

The following image displays an example of a possible screen setup.

The screenshot shows the 'Start workflow' dialog box. It includes a title bar, 'Start' and 'Cancel' buttons, and two main sections. The first section, 'Workflow selection', contains a 'Workflow' dropdown menu set to 'Approve and create PO' and a 'Workflow due date' field set to '24.11.2016'. The second section, 'Approve PO', contains a 'Duration' field and a table with columns: 'User type', 'Recipient', 'Long name', 'E-Mail', and 'Language'. The table has two rows: 'Internet user' with recipient 'PO_APPROVER' and 'SAP user' with an empty recipient field. The third section, 'Step 2', also contains a 'Duration' field and a table with the same columns. The 'SAP user' row is checked in the 'User type' column.

Start a one-step workflow

To start a one-step workflow, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Start**.

The **Start workflow** dialog box is displayed. Which options are available in this dialog box depends on how the workflow is configured.

3. In the **Workflow selection** pane, select the workflow that you want to start. Then, in the **Workflow due date** field, enter the date by which the workflow should be completed.
4. To enter a recipient, select a user type (necessary only if several user types have been defined in the workflow step), and then enter or search for the recipient's user name.
5. Optional. In the **Note** tab, add a note for the workflow processor.
6. Click **Start**.

Start a multi-step workflow

Some workflows may have multiple steps or multiple recipients per step. Each step is displayed in its own pane and has its own processor list.

Add recipients for a step

To add recipients for a step, complete the following steps.

1. In the pane of the corresponding step, select a user type (necessary only if several user types have been defined in the workflow step), and then enter or search for the recipient's user name.
2. If required, click **New line** to add a second recipient.

Add and remove processors

After a workflow has started, you may be able to add additional processors to workflow steps or removed assigned processors (depending on the configuration of the steps).

Add a processor

To add a processor, complete the following steps.

1. To open the document details, in the [document overview list](#), click the document number.
2. On the **Actions** bar, click **Continue**.

The **Add processor to steps** dialog box is displayed.

3. To enter a recipient, select a user type (necessary only if several user types have been defined in the workflow step), and then enter or search for the recipient's user name.
4. Optional. In the **Note** tab, add a note for the workflow processor.
5. Click **Continue**.

Remove a processor

To remove a processor, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Recall**.

The **Workflow recall** dialog box is displayed.

Processors						
Sel.	WF	Number	Workflow due date ↓	Step	Step overdue from	Processor
☐	Workflow 1	1265	31.12.9999	Step 1	31.12.9999	LORBER

3. Select the processor by selecting the check box, and then click **Remove processor**.

Recall a workflow

Sometimes, it may be necessary to stop the processing of a document that has been sent to a workflow. For example, a requisition is still in the approval workflow, but the requested goods or services are no longer required. In this case, you can recall the document from the workflow.

Note: This procedure does not apply to Accounts Payable documents. See [Recalling Accounts Payable documents](#).

To recall a document from a workflow, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Recall**.

The **Workflow recall** dialog box is displayed.

3. Click **Complete recall**.

Recall Accounts Payable documents

If your system has been configured accordingly, you can recall Accounts Payable documents that you have already approved in a workflow. Depending on the configuration, you may only be able to recall the document if it has not yet been approved by a subsequent workflow processor. You also cannot recall a document if the entire workflow has been completed.

To recall an Accounts Payable document, complete the following steps.

1. In the [Worklist](#), click the **Recall** category. This category displays only those documents that can be recalled.
2. Select the check box next to the document(s) that you want to recall.
3. On the **Actions** bar, click **Recall**.

View workflow status

To view the status of a workflow, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Status**.

The **Workflow status** window displays information about the currently selected workflow and its steps. Use the **Workflow** drop-down list to select and view information about another workflow. Each area can be collapsed or expanded using **Minimize**  and **Maximize**  in the upper-left corner. Notes added to the document can be viewed in the **Note** tab.

Workflow status

When a workflow has been completed, the workflow status is available as an [attachment](#) to the document.

Approve documents

The Worklist usually contains a category (for example, the **To approve** category), with a list of all the documents that are in workflow and are awaiting your approval.

To approve a document, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Approve**.
3. If the workflow step has been configured to require a note upon approving, in the **Note** tab, write the reason for approving the document.

If this is the last or only step in the workflow, the document is displayed in the Worklist, with the status **Approved** . If the workflow consists of further steps, the document moves to the next step.

4. Depending on the workflow configuration, you may have to [assign processors](#) for the next step.

Approve line items

Some workflows require you to approve not just the entire document, but individual items on it. You see only the line items that are assigned to you for approval. The following document actually has three items; item 2 is not displayed because it is assigned to someone else.

Items (2)									
Account assignment for purchase order item									
☐	Item	Purch.Doc.	Item	Net amount	Quantity	Order Unit	Text	Deliv.note	Tax rate
☒	1	4500016058	10	19.90	1.000	L			0.000
☐	3	4500016058	30	25.90	1.000	PC			0.000

To approve line items, complete the following steps.

1. Select the check box to the left of the item.

When you save the document, the approval status of each line item is displayed in the **A. Status** column.

2. On the **Actions** bar, click **Approve**.

Warning: Do not click **Reject**. This rejects the entire document, including items that you have approved.

Reject documents

You can choose to reject a document that you receive in a workflow. When you reject a document, the following behaviors are possible:

- The document workflow is completely canceled.
- The document stays in the workflow, but is returned to the previous step in the workflow.
- The document stays in the workflow, but is returned to the first step in the workflow.

These behaviors are defined in the workflow step configuration and cannot be changed by the recipient of the workflow step.

To reject a document, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Reject**.
The **Reject one or more workflow** steps dialog box is displayed.
3. If the workflow step has been configured to require a note upon rejecting, in the **Note** tab, write the reason for rejecting the document.
4. Click **Reject workflow step**.

Forward documents

You can forward a document that is in a workflow, to another user. It is important to note that forwarding a workflow step does not skip the step; it only passes the responsibility of completing the workflow step to that person.

Note: You can forward a document only if the workflow step has been configured to allow forwarding.

To forward a document, complete the following steps.

1. Either select the document from the [document overview list](#) (by selecting the check box to its left), or click the PD document number to go to the [document detail view](#).
2. On the **Actions** bar, click **Forward**.
The **Forward workflow task** dialog box is displayed.
3. Select a user type (necessary only if several user types have been defined in the workflow step), and then enter or search for the name of the user to whom the step should be forwarded. To add more recipients, click **New line**.
4. If the workflow step has been configured to require a note upon forwarding, in the **Note** tab, write the reason for forwarding the document
5. Click **Forward**.

Send and answer queries

If you want to ask someone a question about a document that has been sent to you in a workflow, you can send a query to another user. The document is displayed in the workflow inbox of the query recipient, who can then reply to the query.

Note: You can send a query about a document only if the workflow step has been configured to allow querying.

Send a query

You can use queries to ask other users questions about a document that has been sent to you in a workflow. To send a query, complete the following steps.

1. To open the document details, in the [document overview list](#), click the document number.
2. On the **Actions** bar, click **Query**.
The **Send query about workflow task** dialog box is displayed.
3. In the **Note** tab, write your question.
Note: It is mandatory to add a note before sending a query.
4. To enter a recipient, select a user type (necessary only if several user types have been defined in the workflow step), and then enter or search for the recipient's user name. Click **New line** to add more recipients.
5. Click **Query**.

The query is sent and the workflow status of the document changes to **Query sent** .

Answer a query

When you have received a [query](#) about a document, the document is marked with the workflow status icon, **Query**,  in the [document overview list](#). To answer a query, complete the following steps.

1. To open the document details, in the [document overview list](#), click the document number.
2. Select the **Note** tab.
3. Read the notes that have been added to the document, and then [add a new note](#) in reply to the query.
4. On the **Actions** bar, click **Reply**.

The reply is sent and the workflow status of the document changes to **Sent** .

Change personal settings

You can change your personal settings, such as your [password](#), or [settings that control the behavior of the system](#), and how to [assign substitutes](#) to take over your work while you are absent.

Note: Some or all of these functions may not be available in your system, depending on the configuration.

Change user data and password

To change your user data and password, complete the following steps.

1. In the [Worklist](#), click the **User profile** category and select your profile.
2. In the **Personal data** pane, change your user data, as required.

The screenshot shows the 'User profile' section with the 'Personal data' tab selected. It contains a table with the following fields and values:

Full Name	Barbara Jones
User	Jones
Email address	
Telephone	
Department	
Language	English

3. In the **Password** pane, enter and confirm your new password, as required.

The screenshot shows the 'User profile' section with the 'Password' tab selected. It contains a table with the following fields and values:

Old password	
New password	
New password	

4. Click **Save**.

Change user settings

Depending on your system configuration, you may be able to change certain settings that control the behavior of the system. To change your user settings, complete the following steps.

1. In the [Worklist](#), click the **User profile** category and select your profile.
2. In the **User settings** pane, make changes to the settings.

To view additional information about a setting, position the mouse cursor over the field label.

3. Click **Save**.

Assign substitutes

You can assign users to act as your substitute while you are absent. Substitutes can display and process your documents for the duration of the substitution. Substitutes may be active (for planned periods of absence, such as vacation) or passive (for unplanned absence, such as illness).

Active substitutes

Active substitutes receive an email notification when a document is assigned to you in a workflow. The document is sent both to your own approval Worklist and to the approval Worklist of the substitute. The substitution  icon is shown in the document overview list of the substitute so that they can differentiate between their own documents and your documents.

Passive substitutes

Passive substitutes do not receive email notifications and your documents are not displayed in the approval Worklist for the substitute. In order to take over processing of your documents, the substitute must access a Worklist category in which your documents are displayed (for example, **Requisition Cockpit**).

If your substitute processes a document (for example, approves it), the document is no longer displayed in your approval Worklist and you receive an email notification to inform you that the document has been processed. The substitution is recorded in the document's [messages](#).

Add substitutes

To add substitutes, complete the following steps.

1. In the [Worklist](#), click the **User profile** category and select your profile.
2. In the **Substitute** pane, enter the details of the substitute assignment.
 1. In the **From** and **to** fields, enter the date range during which the substitute should take over your work.
If you do not want to specify a fixed end date, select the **Unlimited** check box and click **Save**. The end date then becomes **12/31/9999**.
 2. In the **User** field, enter the name of the substitute, or use the search help to search for the user (SAP or Internet user).
 3. Select the **Active** check box to make the user an active substitute. Leaving it unchecked makes the user a passive substitute.
 4. Optional. If substitute profiles have been configured in your system, you can assign a profile to the user. For example, you may have different substitutes for approval of requisitions and approval of financial postings. If you assign a "Requisitions" profile to a substitute, that substitute will only be able to process requisitions and not other document types.
 5. To add more substitute users, click **New line** and enter the details for each substitute.
3. Click **Save**.

Change and delete substitutes

Change substitutes

You can only change the validity date, the activation status, or the substitute profile of a substitute. If you want to change the name of the user, you must delete the substitute and add a new substitution with the name of the new user.

To change the validity date or the activation status of a substitute, complete the following steps.

1. In the [Worklist](#), click the **User profile** category and select your profile.
2. In the **Substitute** pane, change the substitute assignment, as required.
 1. In the **From** and **to** fields, select new dates.
 2. Select or clear the **Unlimited** and **Active** check boxes.
3. Click **Save**.

Delete substitutes

To delete a substitute, complete the following steps.

1. In the [Worklist](#), click the **User profile** category and select your profile.
2. In the **Substitute** pane, complete the following substeps.

1. Select the substitute you want to delete by selecting the corresponding check box next to the **From** field.
2. Click **Delete**.
3. Click **Save**.

Accounts Payable

ReadSoft PROCESS DIRECTOR for Accounts Payable allows users to view and process the Accounts Payable documents that are sent to them in a workflow.

About the Worklist

The Worklist for Accounts Payable documents has two categories: **My Workflow Inbox**, which displays documents that need processing, and **Workflow History**, which displays documents that have already been processed.

Note: In the **My Workflow inbox** category, for MM invoices, you can select a purchase order line item and click **Purchase Order history** to view the purchase order history of that line item.

If configured, there is also a **Recall** category, which allows you to recall documents that you have already approved.

Worklist		Incoming Invoice - My Workflow inbox (66)				
Refresh worklist						
Requisitions	897					
Goods Receipts	205					
Financial Postings	185					
Customer Orders	1619					
Order Confirmations						
38						
Incoming Invoices						
My Workflow inbox						
66						
Workflow History

Status	Descript.	Doc. no. ↑	FI / MM	Doc..Date
	Check price mismatch	5035	MM	04/14/2010
	Check missing GR	5041	MM	07/15/2010
	Check price mismatch	5057	MM	04/14/2010
	Check missing GR	5062	MM	07/16/2010
	Check missing GR	5087	MM	09/27/2010
	Check price mismatch	5218	MM	04/14/2010
	Check missing GR	5248	MM	07/16/2010

Depending on the configuration of your system, other categories could be displayed. However, you can only display the document, not take any action on it.

Process documents

To process Accounts Payable documents, complete the following steps.

1. In the [Worklist](#) click the **Incoming Invoices > My Workflow Inbox** category.
2. Click the document number in the [document list](#) to open the document details.
3. You can now view the document data:
 - [View purchase order data](#)
 - [View vendor data](#)
 - [View and add notes](#)
 - [View and add attachments](#), such as the invoice image

Note: If the system has been accordingly configured, the invoice image can be viewed in the overview list.

- [View the workflow status](#)
4. and take action:
- [Approve the document](#)
 - [Reject the document](#)
 - [Forward the document to another user](#)
 - [Send a query to another user](#)

View purchase order data

In the [document detail view](#), the purchase order details are displayed in the different panes.

The screenshot displays the 'Incoming Invoice 26124' document detail view. The interface is organized into several panes:

- General:** Includes fields for Time (000000), Document status (0), PD document number (26124), Source (OCR), FI / MM Doc (MM), Invoice (checked), INVOICE COCKPIT document type, Document type (RE), Purchasing Document (450001054), Company Code (1000), Disc.percent 2 (0.000), Document Header Text, Invoice doc. number, Exchange rate, Translation date, and Follow up flag.
- Invoice:** Includes fields for Vendor (1060), Head office (ReadSoft Ebydos AG), Document Date (11/22/2013), Posting Date, Reference (MUL/20131121/001), GL Account No., Currency (EUR), Gross amount (311.00), Net amount (0.00), Entry sheet, Delivery note, and Business Area.
- Payment:** Includes fields for Baseline payment due, Terms of payment, Days 1, 2, net, Disc.percent 1 (0.000), Discount amount, Payment block, Net due date (01/29/2014), due days 1 (12/29/2013), due days 2 (01/14/2014), Clearing date, and Clearing Document.
- Taxes (1):** Includes a table with columns: TaxC, Tax rate, Tax, Jur. Code. The table contains one row with TaxC 'V0', Tax rate '0.000', Tax '0.00', and Jur. Code.
- Withholding tax (1):** Includes a table with columns: With.Type, With.code, With.brief, With. The table contains one row with With.Type '0.00'.

If the purchase order has documents attached to it, you can also view those attachments.

The screenshot displays the 'Attachments (1)' pane. It features an 'Upload' button and a table with the following data:

Type	Description	Size	Date
	PROCESS DIRECTOR PDF ...	4,560,037	01/21/2014

Below the table, there is a preview of the attached document, which is a PDF file. The preview shows the following text:

The document detail view is where you create, edit and view document information. Which data you can enter and which actions you can perform depends on your system configuration.

Line items can be displayed or hidden by clicking items on the Application toolbar.

You can also display and hide messages relating to the document by clicking the Messages button.

Note: In the PROCESS DIRECTOR configuration, the actions that are available for a document can be switched, depending on the document or workflow status. For this reason, not all actions may be available for all the documents at a given point in their cycle. For example, it may not be possible to add a document that is in a workflow, or is currently being processed by another user, or has already been posted.

View vendor data

In the [document detail view](#), the **Invoice** pane displays the vendor details.

Invoice	
Vendor	1060 ReadSoft Ebydos AG
Head office	
Document Date	07/17/2013
Posting Date	
Reference	
G/L Account No.	
Currency	EUR
Gross amount	10.00
Net amount	0.00
Entry sheet	
Delivery note	
Business Area	

Enter one-time vendor data

On occasions, you may receive invoices from vendors that your organization does not regularly do business with. Your organization will have no record of these vendors in its database. For these vendors, PROCESS DIRECTOR uses the standard SAP CPD (Conto pro Diverse) vendor numbers 1950 and 1960. For vendors with these numbers, an additional tab is displayed in the accounts payable document header, where users can enter the vendor address and bank details.

One-time vendor	
Name 1	
Country Key	
Bank Key	
Bank country key	
Bank Account Number	
Bank Control Key	
City	

Add accounting data

In the accounting lines, you can enter percentages and they will automatically be converted to absolute values, to correspond with the amount in the header data.

Create invoices

If configured in your system, you can create new FI invoices. You cannot create MM invoices. To create invoices, complete the following steps.

1. In the [Worklist](#), double-click the **My workflow inbox** category.
2. On the **Actions** bar, click **Create invoice**.
3. In the **Create document** dialog box, select the type of invoice to be created from the selection list, and then click **Create invoice**.

Create document

✓ Create invoice

* Cancel

Invoice type selection

Please select

4. Enter the invoice details.
5. Click **Save**.

Note: The document is automatically sent to a workflow when saved. Click **Workflow status** to view the details of the workflow. Depending on the workflow step settings, the document may be deleted from the system if it is rejected by the first workflow processor and has not been processed by other users.

Save an invoice as a template

If configured in your system, you can save an invoice as a template and then use the template to create new invoices. To save an invoice as a template, complete the following steps.

1. After creating an invoice, on the **Actions** bar, click **Save template**.
2. In the **Template** dialog box, enter a name for the template and click **Save template**.

Use a saved template to create a new invoice

To use a saved template to create an invoice, complete the following steps.

1. In the [Worklist](#), double-click the **My workflow inbox** category.
2. On the **Actions** bar, click **Create invoice**.
3. In the **Create document** dialog box, select the **Create from template** tab.
4. From the **Templates** drop-down list, select the saved template and click **Create from template**.

5. Enter the invoice details.
6. Click **Save**.

Accounts Receivable

ReadSoft PROCESS DIRECTOR for Accounts Receivable allows users to process Accounts Receivable documents and post them to SAP. Users can:

- Post a customer payment
- Create and modify payment advices
- Post and clear electronic bank statement customer payments
- Create bill of exchange payments
- Perform customer account clearings

Create an Accounts Receivable document

You can create an Accounts Receivable document and [send the document to a workflow](#), or if you have sufficient user rights, [post the document](#) to SAP.

To create an Accounts Receivable document, complete the following steps.

1. In the [Worklist](#), click the appropriate **Accounts Receivable** category, then, on the **Actions** bar, click **Create**.

A new document is created.

2. In the **Document type** field, select the type of document you want to create. Then, on the **Actions** bar, click **Save**.
3. Fill in the header data.
4. Use **New line** and **Delete line** on the line items **Actions** bar to add and delete line items.

Alternatively, click **Item Proposal** to have PROCESS DIRECTOR automatically add suitable line items (see [Propose line items](#)).

5. Click **Save**.

If all information has been entered correctly, the document has the status  **Correct**.

When the Accounts Receivable document has been posted, the PROCESS DIRECTOR document status changes to  **Posted**. You can still edit payment advices as long as they have not been cleared. Changes are passed to the SAP payment advice. Similarly, if changes are made to the SAP payment advice, these changes are reflected in the posted PROCESS DIRECTOR document.

Propose line items

ReadSoft PROCESS DIRECTOR can automatically add suitable customer open items to the Accounts Receivable document.

To propose open line items, complete the following step.

- Click **Item Proposal** and select the appropriate option.

Option	Description
All items	Adds all open customer items.
From invoice list - having the same reference	Proposes only items from the SAP Invoice List that have the same reference (that is, the reference number from the Payment document number field).
Currently due items	Adds only items that fulfill these criteria: 1. The invoice due date is later than the payment date. 2. The posting date lies before the payment date by a specified minimum number of days. You enter the number of days in the Minimum time field, which appears when you click Continue.
Currently due items - payment amount preferred	Same as Currently due items , but in addition to dates, the payment amount is also taken into account. If there are currently due items that match the payment amount, only these items are proposed. If there are no currently due items that match the payment amount, all currently due items are proposed.
Overdue items	Adds only items for which payment is overdue.
Overdue items - amount match preferred	Same as Overdue items , but in addition to dates, the payment amount is also taken into account. If there are overdue items that match the payment amount, only these items are proposed. If there are no overdue items that match the payment amount, all overdue items are proposed.

Option	Description
Unique combination	Only adds items if there is a single, unique combination of open items that matches the payment amount. For example, assume the following customer open items are available: - Item 1 with the amount 100 - Item 2 with the amount 200 - Item 3 with the amount 150 - Item 4 with the amount 250 If the payment amount is 250, two different combinations of items match the payment amount: - Item 1 + Item 3 = 250 - Item 4 = 250 If the payment amount is 600, there is a unique combination, because only one combination of items matches the payment amount: Item 2 + Item 3 + Item 4 = 600 (no other combination amounts to 600)
Unique combination with single match first	Same as Unique combination, except that as soon as a combination is found that matches the payment amount, other open items are not taken into account and the first found match is proposed.

Process Accounts Receivable documents

After transfer of remittance information from suppliers to ReadSoft PROCESS DIRECTOR, Accounts Receivable documents without errors can be posted automatically to SAP. Documents with errors must be corrected manually.

To manually process Accounts Receivable documents, complete the following steps.

- In the [Worklist](#), click the **Accounts Receivable** category.
The document overview list displays all Accounts Receivable documents. Documents that contain errors have the status  **In error**.
- In the **PD Doc no.** column, click the document number of the document you want to view.
- Optional. To display the document image (if available), click .
- On the **Actions** bar, click **Check**. The [system messages](#) resulting from the check will help you identify the errors.
- Correct the errors.
- Click **Save**.

If all information has been entered correctly, the document has the status  **Correct**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the Accounts Receivable document has been posted, the PROCESS DIRECTOR document status changes to  **Posted**. If all the required data is available, clearing postings are automatically created and the document status changes to  **Cleared**.

Clear a Payment Advice

To clear a posted Payment Advice, complete the following step.

- Open the document and click **Clear document**.

The SAP clearing document number is entered in the **Clearing document** field and the document status changes to **Cleared** ☒.

Archiving

ReadSoft PROCESS DIRECTOR for Archiving provides a simple process for archiving documents that have been captured using software such as ReadSoft ENTRANCE or ReadSoft INVOICES. Users can view the captured document image, assign the SAP business object type with which the document should be archived, and fill in the key data. When the document is "posted" in ReadSoft PROCESS DIRECTOR, the archive link is created.

Process archive documents

To process archive documents, complete the following steps.

1. In the [Worklist](#), double-click the **Archiving** category.

A list of documents to be archived is displayed. Documents for which no key data has been entered have the status  **In error or incomplete**.

2. To archive a document, click the document number in the **PD Doc no.** column and in the **Object Type** field select the SAP object type with which the document should be archived.

3. Click **Change key data** on the Actions bar and enter the key data. Which fields are available here depends on the selected object type.

4. Click **Save**.

If all information has been entered correctly, the document has the status ☐ **New or ready for processing**. You can now [post the document](#) to SAP to create the link to the archive. When the document has been posted, the PROCESS DIRECTOR document status changes to ☒ **Processed**.

Asset management

ReadSoft PROCESS DIRECTOR currently provides the following asset posting types to allow users to create asset documents and post these to SAP.

- [Asset Acquisition](#)
- [Asset Retirement](#)
- [Asset Transfer](#)

Create an asset acquisition request

For each asset acquisition posting, a new request needs to be created in ReadSoft PROCESS DIRECTOR. You can also post an acquisition for multiple fixed assets in one request.

To create an asset acquisition request, complete the following steps.

1. In the [Worklist](#), click the appropriate **Asset Acquisition** category. Then, on the **Actions** bar, click **Create**.

A new document is created.

- Fill in the relevant fields on the header data tabs.
- Enter the line items. Use **New line** and **Delete** on the **Actions** bar to add and delete line items.

- Click **Save**.

When you have saved the document, a PD document number is assigned. If all information has been entered correctly, the document has the status **Ready for processing**. You can now [send the document to a workflow](#), or if you have sufficient user rights, [post the document](#) to SAP. When the changes have been posted, the PROCESS DIRECTOR document status changes to **Processed**.

Create an asset transfer request

Assets can be transferred within one company code or between two different company codes. Before a transfer posting can be triggered, the required asset number should already exist in the receiving company.

To create an asset transfer request, complete the following steps.

- In the [Worklist](#), click the appropriate **Asset Transfer Posting** category, then, on the **Actions** bar, click **Create**.
- Select the type of transaction you would like to create.

- Fill in the relevant fields on the header data tabs.

4. Enter the line items. Use **New line** and **Delete** on the **Actions** bar to add and delete line items.
5. Click **Save**.

The screenshot shows the 'Asset Transfer Posting 5' window. It has a toolbar with 'Copy', 'Save', 'Start', 'Status', and 'Back' buttons. The main area is divided into two panels: 'Transaction data' and 'Additional detail'.

When you have saved the document, a PD document number is assigned. If all information has been entered correctly, the document has the status ■ **Ready for processing**. You can now [send the document to a workflow](#), or if you have sufficient user rights, [post the document](#) to SAP. When the changes have been posted, the PROCESS DIRECTOR document status changes to ● **Processed**.

Customer Orders

ReadSoft PROCESS DIRECTOR for Customer Orders allows users to process sales orders based on incoming purchase orders and post them to SAP. Customer Order documents are created in ReadSoft PROCESS DIRECTOR using capture software, which automatically extracts information from incoming purchase orders, whether they are delivered by fax, on paper or in electronic format, and sends this information to ReadSoft PROCESS DIRECTOR.

ReadSoft PROCESS DIRECTOR matches the information against data in SAP (for example, it checks material numbers, amounts and quantities, customer IDs, VAT and other tax IDs) and also automatically determines organizational and partner data, so that much of the customer order data can be automatically filled in.

If there are discrepancies in the data or if information is missing, the PROCESS DIRECTOR customer order document is assigned the status **In error**. Users can then investigate and make corrections and post the document to SAP.

Process customer orders

Captured customer order documents without errors are usually posted automatically to SAP. Documents with errors must be corrected manually.

To process customer orders, complete the following steps.

1. In the [Worklist](#), click the appropriate **Customer Orders** category.
The document list displays all customer order documents. Documents that contain errors have the status  **In error**.
2. In the **PD Doc no.** column, click the document number of the document you want to view.
3. On the **Attachments** tab, click the **PROCESS DIRECTOR scanned document** attachment to display the document image (if available).
4. Click **Check**. The system messages resulting from the check will help you to identify the errors.
5. Status icons at the line item level indicate whether or not the line item contains errors.

Status	Item	Material	Descript.	MatEntered	Order qty	SU	Net price	Net value	Currency	Plant
	1	484-7718	Capacitor 18pf	4847718	200.000	PC	0.09	18.00	EUR	1000
				4847702	200.000	PC	0.09	18.00	EUR	1000

6. The field containing the error is highlighted, and the status tooltip displays a message explaining what the problem is.

Correct the errors.

5. Click **Save**.

If all information has been entered correctly, the document has the status  **No sales order created**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the customer order has been posted, the PROCESS DIRECTOR document status changes to  **Sales order posted**.

Example

In the following example, neither the ship-to party nor the sold-to party have been transferred from the captured document to ReadSoft PROCESS DIRECTOR. ReadSoft PROCESS DIRECTOR can also not determine the sales organization, as this derived from the Sold-to party.

To correct the error, enter the sold-to party (**SH**). The system will then be able to determine the sales organization.

Electronic Bank Statements

ReadSoft PROCESS DIRECTOR for Electronic Bank Statements enables users to match line items of electronic bank statements with uncleared payment items. Payment advices can be automatically or manually assigned to the uncleared items. If a match is found, the payment advice is automatically assigned. If no match is found, users can manually enter the payment advice number, or create a new PROCESS DIRECTOR payment advice document and post it in SAP. The details are then entered in the PROCESS DIRECTOR electronic bank statement item.

Process electronic bank statements

To process electronic bank statements, complete the following steps.

- In the [Worklist](#), click the **Electronic Bank Statements** category.
The document list displays all electronic bank statement documents. Documents that contain errors have the status ■ **In error**.
- In the **PD Doc no.** column, click the document number of the document you want to view.
- Select a line item by clicking the check box to its left and click **Payment Advice Items** to view the corresponding payment advice items.

Items that are not cleared are marked with the status . Cleared items are marked with the status . The header status of the document is set to **Processed**

Clear an item

ReadSoft PROCESS DIRECTOR attempts to automatically match electronic bank statement items to a PROCESS DIRECTOR Payment Advice and clear the items. If no match is found, items must be cleared manually.

To clear an item, you have the following options.

Manually select the payment advice number by using the search help

To manually select an existing payment advice number by using the search help, complete the following steps.

1. Select the bank statement with the uncleared items.
2. Select the uncleared item and click **Change data**.
3. In the **Assign data** popup, fill in the required information and click **Save**.
4. You can clear the item by clicking **Post data**.

Create a new PROCESS DIRECTOR payment advice and post it in SAP

To create a new payment advice, complete the following steps.

1. Select the bank statement with the uncleared items.
2. Click the **Create Payment Advice**.
3. Fill in the required information and save and post the document.

6. Fill in the header data and posting position fields. Some of this information may be entered automatically.

Use **New line** to add posting positions, and **Delete** to delete positions.

7. Click **Save**.

If all information has been entered correctly, the document has the status  **Ready for posting**. You can now [send the document to a workflow](#), or if you have sufficient user rights, [post the document](#) to SAP. When the financial posting has been posted, the PROCESS DIRECTOR document status changes to  **Posted**.

Note: If the document is posted with reference to a [deferral posting](#), the number of the deferral document is displayed in the **Details** data pane.

Tip: If your system has been configured accordingly, you can [create a new document from an external file](#), or [upload line items from an external file](#).

Change the posting type

To change the posting type, complete the following steps.

1. Click the appropriate **G/L Account Postings** or **Customer Postings** category.
2. In the [document overview list](#), click the document number to open the document details of the document whose posting type you want to change.
3. On the **Actions** bar, click **Change Posting Type**.
4. Select a posting type and click **Continue**.

5. Depending on the posting type, you may have to enter some [additional information](#).
6. Click **Continue**.
7. Click **Save**.

G/L Account Postings

Regular posting

A regular posting is a simple posting to a G/L account or between G/L accounts.

You can use a [recurring entry](#) posting to automatically create regular postings at regular intervals.

Adjustment posting

About adjustment postings

An adjustment posting can be used to correct a document that has already been posted. For example, if costs have been assigned to an incorrect CO object (such as a cost center), you can create an adjustment posting to move the costs to the correct CO object (within the same G/L account).

Create an adjustment posting

When you create an adjustment posting, you specify the original SAP document, company code and fiscal year, the CO object to which the costs were incorrectly assigned, and the target CO object to which the costs should be moved.

Instead of a CO object, you can select a specific line item from the original document.

Please specify additional data

ReadSoft PROCESS DIRECTOR creates a new document, adds the required posting positions, and copies all other data from the original SAP document.

The document number and fiscal year of the original document are displayed in the **Details** data pane.

Provision posting

About provision postings

A provision posting enables you to allocate possible costs that may arise in the future. Often the exact amount and due date of such costs are not known, but there may be a financial or legal requirement to record them. When the actual costs are incurred (or do not actually arise), the provision posting is reversed. Provision postings are therefore posted with a validity date, and should be reversed by this date. The validity date is entered in the **Details** data pane.

ReadSoft PROCESS DIRECTOR monitors the validity date of provision postings and sends an email notification to the person who created the posting when the validity date is reached. The posting can then either be reversed or the validity date changed. Overdue provisions may also be listed in a dedicated Worklist category.

Reverse a provision

To reverse a provision, complete the following step.

- Open the document and, on the **Actions** bar, click **Reverse**.

The document status changes to  **Reversed**. The number of the reversal document is displayed in the **Details** data pane.

Accrual with reversal posting

About accrual with reversal postings

An accrual with reversal posting enables you to allocate costs in the current period, but post them in a future period. Like provisions, accrual with reversal postings are temporary postings, but in contrast to provisions, the exact amount and due date are known. For example, you may have costs that you pay quarterly, but want to allocate them in each month of the quarter. The monthly accrual postings then are reversed in a later period, or when the quarterly costs are posted.

Create an accrual with reversal posting

When you create an accrual with reversal posting, you must specify a reversal reason and a reversal date. After posting to SAP, the document is automatically reversed by the standard SAP procedure (F.81). The number of the reversal document is displayed in the **Details** data pane.

You can use a [recurring accrual](#) document to automatically create accrual with reversal postings at regular intervals.

Accrual with reversal postings can also be [created from PROCESS DIRECTOR Accounts Payable documents](#).

Recurring entry / recurring accrual with reversal posting

A recurring entry posting or a recurring accrual with reversal posting can be used to automatically create new postings at regular intervals. A recurring entry/accrual with reversal document cannot be posted. It simply serves as a template for the creation of new postings.

You specify when and how often a new posting should be created in the **Recurring schedule** data pane.

☒ Recurring schedule	
First run on	02/01/2013
Last run on	02/01/2014
Interval in months	Per month
Run date	15
Last Document Date	02/15/2013

Field	Description
First run on / Last run on	The time frame within which documents will be created.
Interval in months	The frequency with which documents will be created, for example, every month
Run date	The exact date on which documents will be created, for example, on the 15th of each month.
Last document date	The last date on which a document was created. This field is automatically filled every time a new document is created.

New regular posting or accrual with reversal posting documents are automatically created on the specified date. The number of the recurring entry/accrual with reversal document template is displayed in the **Details** data pane of these documents.

When the last scheduled document has been created, the recurring entry document is automatically completed, that is, the status changes to  and it can no longer be edited. You can also manually complete a recurring entry/accrual document at any time by clicking **Complete** on the Actions bar.

The **Relations** data pane displays a list of all documents that have been created from a recurring entry/accrual template.

Accrual from PROCESS DIRECTOR Accounts Payable posting

An accrual from ReadSoft PROCESS DIRECTOR Accounts Payable posting is created from the /EBY/ICIV_ACCRUAL_REPORT report. This report lists all line items in PROCESS DIRECTOR Accounts Payable documents that have not yet been posted.

It is possible to select line items in this report and create a PROCESS DIRECTOR accrual document consisting of all selected line items and one aggregated offsetting/balancing position.

Depending on your configuration, the **Text** field in the resulting accrual from PD AP document may display the number of the PD AP document, the line item number (MM documents only), and the accounting line number.

Item	GiL Acct	D/C Indic.	Amount	Currency	Tax code	Text	Cost Ctr	Order	WBS elem.	Pro
1	400000	Credit	100.00	EUR		22402.000001	1000			
2	400000	Debit	500.00	EUR	VN	22107.000005.001	1000			140
3	400000	Debit	52.00	EUR	VN	21912.000001.001	1000			140
4	400000	Debit	25.97	EUR	VN	21912.000002.001	1000			140
5	451000	Credit	477.97	EUR			1000			

Note: You can also display the **PROCESS DIRECTOR AP document number** field, which stores the number of the corresponding PD AP document. Click the number to jump to the PD AP document.

See the *PROCESS DIRECTOR Accounts Payable User Guide* for information on creating documents from this report.

Customer Postings

Invoice/Credit note posting

With these postings, you can create an invoice or a credit note for a customer and post it to SAP.

You enter the customer details in the **Customer Details** and **Customer Payment** data panes.

You can use a [recurring invoice posting](#) to automatically create customer invoices at regular intervals.

Recurring invoice posting

A recurring invoice posting can be used to automatically create new [invoice postings](#) (not credit notes) at regular intervals. A recurring invoice document cannot be posted. It simply serves as a template for the creation of new postings.

You specify when and how often a new posting should be created in the **Recurring schedule** data pane.

Field	Description
First run on / Last run on	The time frame within which documents will be created.
Interval in months	The frequency with which documents will be created, for example, every month
Run date	The exact date on which documents will be created, for example, on the 22nd of each month.
Last document date	The last date on which a document was created. This field is automatically filled every time a new document is created.

New invoice posting documents are automatically created on the specified date. The number of the recurring invoice document template is displayed in the **Details** data pane of these documents.

When the last scheduled document has been created, the recurring invoice document is automatically completed, that is, the status changes to  and it can no longer be edited. You can also manually complete a recurring invoice document at any time by clicking **Complete** on the Actions bar.

The **Relations** data pane displays a list of all documents that have been created from a recurring invoice template.

Deferral (invoice) posting

A deferral (invoice) posting enables you to post revenue from a customer invoice to a deferred revenue account, rather than recording the entire amount on the Profit and Loss statement (P&L) in the period in which the invoice is posted. Such revenue is later re-allocated ("consumed") with one or more subsequent posting documents (for example, a [regular posting](#) or [recurring entry](#)) to the actual revenue account. For example, you may invoice your customer at the beginning of the year for services that are delivered throughout the year, but you want to distribute the revenue from the invoice over the entire year, rather than recording the entire amount on your revenue account when the invoice is issued. The entire process, starting with the posting of the deferral invoice and the subsequent re-allocation postings, can be covered and controlled (complete re-allocation within a given time) by ReadSoft PROCESS DIRECTOR.

The entire invoice amount is posted to a deferred revenue account and then "consumed" by creating regular postings that transfer part of the amount from deferred revenue account to the actual revenue account. These amounts will then appear on the P&L. Deferral (invoice) postings are therefore posted with a validity date, and should be consumed by this date. The validity date is entered in the **Details** data pane.

Whenever you make a posting against the deferred invoice document, the **Consumed Amount** is recalculated so that you can see how much has been posted to the actual revenue account. ReadSoft PROCESS DIRECTOR monitors the validity date of deferral (invoice) postings and sends an email notification to the person who created the posting when the validity date is reached. Deferral postings that are not fully consumed by the validity date may also be listed in a dedicated Worklist category.

ReadSoft PROCESS DIRECTOR creates a new document and adds the required posting positions and key data from the original SAP document.

The document number and fiscal year of the original document are displayed in the **Details** data pane.

When the document is posted to SAP, the standard SAP mechanisms can automatically close open items on the customer account.

Goods Receipts

ReadSoft PROCESS DIRECTOR for Goods Receipts allows users to create and process goods receipts and post them to SAP. Goods receipts can be entered manually in the ReadSoft PROCESS DIRECTOR SAP GUI or Web Application, or capture software can be used to automatically capture information from delivery notes. This product automatically extracts information from incoming delivery notes, whether they are delivered by fax, on paper or in electronic format, and sends this information to ReadSoft PROCESS DIRECTOR.

ReadSoft PROCESS DIRECTOR matches the information against data in SAP and also automatically determines organizational and other data, so that much of the goods receipt data can be automatically filled in.

If there are discrepancies in the data or if information is missing, the PROCESS DIRECTOR goods receipt document is assigned the status **In error**. Users can then investigate and make corrections and post the document to SAP.

Create a goods receipt

When you create a goods receipt, you must select the purchase order to which the goods receipt applies. If you already have a posted PROCESS DIRECTOR requisition for the goods that references a purchase order, you can create the goods receipt directly from this document, provided that the goods are all ordered from the same vendor.

Create a goods receipt based on a purchase order

To create a goods receipt without a requisition, complete the following steps.

1. In the [Worklist](#), click the appropriate **Goods Receipt** category, then, on the **Actions** bar, click **Create**.
A new document is created.
2. Fill in the header fields.
3. Edit the line items. Use **New line** and **Delete line** on the line items Actions bar to add and delete line items.

To transfer line items from an existing purchase order to the goods receipt, on the Actions bar, click **Add PO Items** on the . In the **Add PO Items to Goods Receipt** dialog box, enter the number of the purchase order or use [search help](#) to select it and click **Add PO Items**. You can also specify an item, a movement type and a special stock indicator.

PO	Item	MvT	Spec.Stock
☒	?	0	101

4. Check the **OK** check box if the delivery of this item is to be considered complete.

5. Click **Save**.

Create a goods receipt based on a requisition

To create a goods receipt that is based on a requisition, complete the following steps.

1. In the [document overview list](#), click the PROCESS DIRECTOR requisition document number (**PD doc. no.**). Then, on the **Actions** bar, click **Goods Receipt**.

If you select a requisition that has several vendors, you will be prompted to choose one of those vendors.

A new goods receipt document is created. The line item information from the purchase order is automatically entered into the line items area of the goods receipt. The purchase order number and, in the case of invoices, the PROCESS DIRECTOR invoice document number is also entered in the goods receipt.

2. Make changes as necessary.
3. Click **Save**.

If all information has been entered correctly, the document has the status ☐ **Ready for posting**. You can now [send the document to a workflow](#), or if you have sufficient user rights, [post the document](#) to SAP. When the financial posting has been posted, the PROCESS DIRECTOR document status changes to **Posted**.

Process goods receipts

Captured goods receipt documents without errors are usually posted automatically to SAP. Documents with errors must be corrected manually.

To process goods receipts, complete the following steps.

1. In the [Worklist](#), click the appropriate **Goods Receipt** category.

The document list displays all goods receipt documents. Documents that contain errors have the status  **In error**.

2. In the **PD Doc no.** column, click the document number of the document you want to view.
3. On the **Attachments** tab, click the **PROCESS DIRECTOR scanned document** attachment to display the document image (if available).

Note: For purchase orders with inbound deliveries, additional details are displayed; namely the delivery date, the delivery quantity, and the sales unit.

4. Click **Check**. The system messages resulting from the check will help you to identify the errors.
5. Correct the errors.
6. Click **Save**.

If all information has been entered correctly, the document has the status   **No goods movement posted**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the goods receipt has been posted, the PROCESS DIRECTOR document status changes to   **Goods movement posted**.

Example

In the following example, line item data has not been transferred from the captured document to PROCESS DIRECTOR. PROCESS DIRECTOR has filled the goods receipt line items with data from the purchase order, except for the quantity.

To correct the error, enter the line item quantities shown in the image and check the **OK** checkbox for each item.

Invoice Block and Cancellation

ReadSoft PROCESS DIRECTOR for Invoice Block and Cancellation allows users to create requests to block or release invoices for payment, or to cancel invoices.

Create a block/unblock request

To create a block/unblock request, complete the following steps.

1. In the [Worklist](#), click the **Invoice Blocking/Unblocking** category.
2. In the [document overview list](#), on the **Actions** bar, click **Create**.

3. Select the transaction type **Block** or **Cancel**, fill in the required fields and click **Continue**. The **Document number** field refers to the PROCESS DIRECTOR Accounts Payable document number. If the invoice has more than one line with posting key 31 and different vendor numbers, you must also enter the vendor and line item.

When the changes have been posted, the PROCESS DIRECTOR document status changes to  **Processed**.

Master Data Maintenance

ReadSoft PROCESS DIRECTOR for Master Data Maintenance allows users to create requests for changes, deletions or additions to master data. Master data is usually maintained centrally, but often those responsible for maintaining the data are not aware of changes, such as a change of responsibility for a cost center or a change in a vendor address. That's where ReadSoft PROCESS DIRECTOR can help. Users can create a change request document in ReadSoft PROCESS DIRECTOR, which can then be sent to a workflow for approval, if necessary. After approval, the document is displayed in the Worklist of the person(s) responsible for master data maintenance, who can then post the master data changes to SAP.

ReadSoft PROCESS DIRECTOR provides the following master data types out of the box.

- [Asset master data maintenance](#)
- [Cost center maintenance](#)
- [Customer vendor master maintenance](#)
- [General ledger account maintenance](#)
- [Profit center maintenance](#)
- [Vendor master data maintenance](#)

Create an asset master maintenance request

To create an asset master maintenance request, complete the following steps.

1. In the [Worklist](#), click the appropriate **Asset Master Maintenance** category.
2. In the [document overview list](#), on the **Actions** bar, click **Create**.
3. Select the type of change you want to make (**Create**, **Update** or **Delete**), fill in the fields and click **Continue**.

If necessary, you can enter the reference asset number of an existing asset and its data will be entered in the new request.

A new document is created.

Deactiv.	Area	Dep. area	Key	UsefLife	Per	Ord. depr.
☐	1	Book deprec.	LINR	5	0	
☐	15	Tax bal.sht.	LINR	5	0	
☐	20	Cost-acc.	LINA	6	0	
☐	30	Group GBP	LINR	5	0	
☐	31	Group DEM	LINR	5	0	
☐	32	BkDep(g.cur)	LINR	5	0	

4. Fill in or edit any relevant fields on the header data tabs.

5. If necessary, select the **Deactivation** check boxes for the depreciation areas that need to be inactive for this asset.
6. Click **Save**.

When you have saved the document, a PD document number is assigned. If all information has been entered correctly, the document has the status  **Ready for processing**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the changes have been posted, the PROCESS DIRECTOR document status changes to  **Processed**.

Add multiple assets to the request

To add multiple assets to the request, complete the following steps.

1. In the [document list](#), on the **Actions** bar, click **Create**.
2. Select **Create**, fill in the **Asset class** and **Company Code** fields and click **Continue**.
3. Enter all the data that is the same for all the asset master data records you want to create and save the document.
4. Add new lines to the **List of Assets**. The fields in the lines will be automatically filled in using the data from the header.

☑ List of Assets (3)

4. Fill in any relevant fields on the header data tabs.
5. Click **Save**.

When you have saved the document, a PD document number is assigned. If all information has been entered correctly, the document has the status  **Ready for processing**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the changes have been posted, the PROCESS DIRECTOR document status changes to  **Processed**.

Add multiple cost centers to the request

To add multiple cost centers to the request, complete the following steps.

1. In the [document list](#), on the **Actions** bar, click **Create**.
2. Select **Create**, fill in the **Cost Center** and **Controlling Area** fields and click **Continue**.
3. Enter all the data that is the same for all the cost centers you want to create and save the document.
4. Add new lines to the **Collection of Cost Centers**. The fields in the lines will be automatically filled in using the data from the header.
5. If necessary, change the required fields.

☒ Collection of Cost Centers (3)

6. Post the document.

Create a customer master maintenance request

To create a customer master maintenance request, complete the following steps.

1. In the [Worklist](#), click the appropriate **Customer Master maintenance** category.
2. In the [document overview list](#), on the **Actions** bar, click **Create**.

3. Select the type of change you want to make (**Create** or **Update**), fill in the fields and click **Continue**.

General ledger accounts

Create a G/L account maintenance request

To create a G/L account maintenance request, complete the following steps.

1. In the [Worklist](#), click the appropriate **G/L Account Maintenance** category.
2. In the [document overview list](#), on the **Actions** bar, click **Create**.
3. Select the type of change you want to make (**Create** or **Update**), fill in the fields and click **Continue**.

If necessary, in the **Reference G/L account** field, you can select an existing G/L account and its data will be entered in the new request.

When the changes have been posted, the PROCESS DIRECTOR document status changes to  **Processed**.

Requests for blocking/deletion

To create a block or deletion request, complete the following steps.

1. Create a new request with the **Update** activity and enter the G/L account number.
2. Click the **Block/Deletion** tab.
3. Set the appropriate blocking or deletion options.

The screenshot shows the 'New Master Data G/L Account' dialog box with the 'Block/Deletion' tab selected. The dialog has a title bar, 'Save' and 'Cancel' buttons, and three tabs: 'General data', 'Control data', and 'Create/bank/interest'. The 'Block/Deletion' tab contains the following options:

When the changes have been posted, the PROCESS DIRECTOR document status changes to **Processed**.

Vendors

Create a vendor master maintenance request

To create a vendor master maintenance request, complete the following steps.

1. In the [Worklist](#), click the appropriate **Vendor Master Maintenance** category.
2. In the [document overview list](#), on the **Actions** bar, click **Create**.
3. Select the type of change you want to make (**Create** or **Update**), fill in the fields and click **Continue**.

You can enter the reference vendor number of an existing vendor and its data will be entered in the new request.

Note: ReadSoft PROCESS DIRECTOR supports both external and internal number ranges for the vendor account number. Which number range is used depends on the **Account group**. If an internal number range is used, leave the **Vendor** field blank, as it will be generated by the SAP system when the account is created. The system informs you if you need to fill in the **Vendor** field.

When you have saved the document, a PD document number is assigned. If all information has been entered correctly, the document has the status **Ready for processing**. Usually, you will need to [send the document to a workflow](#).

Processing in the workflow

Different users may be responsible for maintaining different types of data, and during the workflow, the users enter the appropriate data. These users will have access to different tabs and fields. For example, purchasing users will be able to see the **Purchasing data** tab and accounting users will be able to see the **Accounting data** tab.

To process data in the workflow, complete the following steps.

1. [Open the document](#) to approve it.
2. Enter all the required data.

3. If necessary and if you have the required rights, add new lines to the bank details, enter the required information and save the document.

4. Click **Save**.

When you have saved the document, a PD document number is assigned. If all information has been entered correctly, the document has the status  **Ready for processing**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the changes have been posted, the PROCESS DIRECTOR document status changes to  **Processed**.

Order Confirmations

ReadSoft PROCESS DIRECTOR for Order Confirmations allows users to create and process order confirmations and post them to SAP. Order confirmation documents can be entered manually in the ReadSoft PROCESS DIRECTOR SAP GUI or Web Application, or capture software can be used to automatically capture information from order confirmations. This product automatically extracts information from incoming order confirmations, whether they are delivered by fax, on paper or in electronic format, and sends this information to ReadSoft PROCESS DIRECTOR.

ReadSoft PROCESS DIRECTOR matches the information against data in SAP and also automatically determines organizational and other data, so that much of the order confirmation data can be automatically filled in.

If there are discrepancies in the data or if information is missing, the PROCESS DIRECTOR order confirmation document is assigned the status **In error or incomplete**. Users can then investigate and make corrections and post the document to SAP.

Create an order confirmation

To create an order confirmation, complete the following steps.

1. In the [Worklist](#), click the **Order Confirmations** category
2. In the [document overview list](#), on the **Actions** bar, click **Create**.

A new document is created.

3. Fill in the header data and save the document.

If you have entered a purchase order number in the **Purchasing Document** field, the line items of the purchase order are displayed in the **PO Items** area. This can assist you in entering the order confirmation line items.

4. Use **New line** and **Delete** on the line items **Actions** bar to add and delete order confirmation line items.

Alternatively, to automatically enter the purchase order items, click **Items Proposal** on the **Actions** bar.

ReadSoft PROCESS DIRECTOR proposes only those items for which the confirmation control has been set in their respective purchase orders.

5. Make changes as necessary.
6. On the **Actions** bar, click **Check**. The [system messages](#) resulting from the check will help you identify the errors.

Note: If the order confirmation contains a delivery date, quantity, or net price that is different from the purchase order, the corresponding value is highlighted in red and the difference is displayed in the **Diff date**, **Qty difference**, or **Price difference** field respectively.

7. Click **Save**.

If all information has been entered correctly, the document has the status  **New or ready for processing**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the order confirmation has been posted, the PROCESS DIRECTOR document status changes to  **Processed**.

Tip: You can also create an order confirmation based on a PROCESS DIRECTOR requisition document, provided that the goods are all ordered from the same vendor and the requisition references a purchase order. In the **Requisitions** document overview list, select the requisition and click **Order confirmation**.

Process order confirmations

Captured order confirmation documents without errors are usually posted automatically to SAP. Documents with errors must be corrected manually.

To create an order confirmation, complete the following steps.

1. In the [Worklist](#), click the **Order Confirmations** category.

The document list displays all order confirmation documents. Documents that contain errors have the status  **In error or incomplete**.

2. In the **PD Doc no.** column, click the document number of the document you want to view.
3. If necessary, display further information.

Note: The order confirmation quantity is automatically checked against the quantity in the related purchase order. If configured, the quantity conversion rules are applied.

4. On the **Attachments** tab, click the **PROCESS DIRECTOR scanned document** attachment to display the document image (if available).
5. On the **Actions** bar, click **Check**. The [system messages](#) resulting from the check will help you identify the errors.

Note: If the document has the same PO item as another document created earlier, an error message stating that the previous document should be processed first, is displayed.

6. Correct the errors.
7. Click **Save**.

If all information has been entered correctly, the document has the status  **New or ready for processing**. You can now [send the document to a workflow](#) or, if you have sufficient user rights, [post the document](#) to SAP. When the order confirmation has been posted, the PROCESS DIRECTOR document status changes to  **Processed**.

Example

In the following example, no order units have been transferred from the captured document. In addition, for item 40 the vendor material number has been entered instead of the material number from the purchase order.

To correct the errors, enter the order unit PC in all order confirmation line items. In line item 40, change the material number to 40-200F to match the purchase order.

Payment Approvals

ReadSoft PROCESS DIRECTOR for Payment Approvals allows users to view and approve payment proposals that have been created with SAP transaction F110. When a payment proposal is created in SAP, it is displayed in the PROCESS DIRECTOR [Payment Approvals overview list](#). It can then be sent to a [workflow](#) for approval. During approval, users can add, remove or change payment block indicators for individual items in the proposal. Payment items for which the payment block indicator has been changed are clearly marked with a status icon in the overview list.

Users who are responsible for payment runs in SAP can view the payment proposals in ReadSoft PROCESS DIRECTOR and manually enter the changes that have made in ReadSoft PROCESS DIRECTOR in the payment proposal in F110. After the payment run has been carried out in SAP, it is listed in ReadSoft PROCESS DIRECTOR as completed.

3. To set, remove or change the payment block indicator, use the search help in the **PBk** column to select the appropriate payment block indicator. When you save the document, the  icon is displayed in the **State** column of the items for which you changed the payment block indicator.

Requisitions

ReadSoft PROCESS DIRECTOR for Requisitions allows users to use online catalogs to select items, create a requisition, send the requisition document to a workflow (for approval or correction) and ultimately create a purchase order or purchase requisition in SAP.

To create a new requisition, complete the following steps.

1. [Create the document](#)
2. [Enter header data](#)
3. [Enter line items](#)
4. [Enter account assignments](#)
5. [Save the document](#)

Create a requisition document

To create a requisition document, complete the following steps.

1. In the [Worklist](#), click the appropriate **Requisitions** category.
2. In the [document overview list](#), on the **Actions** bar, click **Create**.

If your system has been configured to use outline agreements, a popup appears in which you can enter an outline agreement on which to base your new document. If you do not want to use an agreement, leave the field empty and click **Continue**. See [About outline agreements](#) for more information.

Enter the header data

Enter the header data for a document in the tabs displayed in the [document detail view](#). Depending on your system configuration and user rights, some fields may have been automatically filled by the system and some fields may be read-only.

Depending on the configuration, fields that require an entry and cannot be left blank may be highlighted.

Fields with the  button have search help available to assist you in finding the right value. See [Use search help](#) for more information.

By default, there are three tabs containing header data: **General**, **Organization data** and **Vendor**. The **Texts**, **Notes** and **Attachments** tabs can be used to add additional information to the document. The **Attachments** tab is only displayed if files have been attached to the document. See [Notes, texts and attachments](#) for more information on these tabs.

Enter line items

You can enter line item data in the following possible ways (depending on your system configuration):

- [Use an online catalog](#) to select items
- [Enter items manually](#)
- [Use an outline agreement](#) to enter items
- [Use an existing purchasing document](#) to enter items

Order items from an online catalog

You can select items in online catalogs, which are then entered into your document as line items.

Note: Your system may use a different catalog than the one shown here and the elements in the interface such as buttons, tabs and icons may look different. However, the procedure is essentially the same for all catalogs: open the catalog, add products to your shopping cart, open your shopping cart and send your order.

To use the catalog, you must either be [creating a new document](#) or [editing an existing document](#).

1. On the **Actions** bar, click **Catalog**.

If more than one catalog is available, a dialog box is displayed. Select the catalog you want to use and click **OK**

2. Use the search function in the catalog to find items.

3. Add items to your shopping cart.

4. When you have finished adding items, open your shopping cart.

5. Send your order.

You return to ReadSoft PROCESS DIRECTOR and the items selected in the catalog are now entered as line items in your document. Depending on your catalog, some fields may have values automatically entered, such as the delivery date.

Enter items manually

To manually enter items, complete the following steps.

1. In the items area, click **New line** to create a new line item row.
2. Enter the details for the item. Some fields may be automatically filled by the system.

Items (2)							
? MaintainE. + New line * Delete < Accounts > Texts							
☐ Template	St	Item	Short text	Quantity	OUn	Delivery	Amount
☐		00010	14 QT., BLACK UL LISTED WAST	3.000	PC		20.75
☐		00020	New item	1.000	PC		123.00

In the **Template** field you can select an [entry template](#) that contains predefined fields, such as the vendor or the material group. When you select the template, the predefined fields are entered in your line item and you only have to fill in the missing information.

3. Add additional lines as needed. To delete line items, select the check box next to the item and then click **Delete**.
4. Click **Save**.

About outline agreements

If your system has been configured to use outline agreements, the **Outline agreement or purchase order for using related data** dialog box is displayed when you [create a new document](#).

Outline agreement or purchase order for using related data

Outline agreement

If you select an outline agreement when you create a new document, the relevant line items are automatically inserted in your document, including prices and other relevant information, so that you only have to enter the required quantities. You can delete any inserted line items that you do not need.

For example, if your company has an outline agreement with a vendor to supply PCs, the outline agreement will contain all required line items, such as CPU, monitor, keyboard, etc., at the agreed prices. Using the outline agreement will ensure that you have all necessary items at the correct price in your requisition document.

Select an outline agreement

To select an outline agreement, complete the following step.

- Use the [search help](#) to find and select the agreement that you want to use and then click **Continue**.

Note: You can only select an outline agreement when you first create the document. Once you have left this dialog box, you will not be able to open it again for this document.

Create a document without an outline agreement

To create a document without an outline agreement, complete the following step.

- If you do not want to use an outline agreement, leave the **Outline agreement** field empty and click **Continue**.

Use existing purchasing documents

If your system has been configured to use [outline agreements](#), the **Outline agreement or purchase order for using related data** dialog box is displayed when you [create a new document](#).

Outline agreement or purchase order for using related data

Outline agreement

✓ Continue

With this dialog box, you can use outline agreements or existing purchasing documents to add line items. If you select an existing purchasing document when you create a new document, the line items from the existing purchasing document are automatically inserted in your document. You can then make changes or delete any inserted line items that you do not need.

Select an existing purchase document

To select an existing purchasing document, complete the following steps.

1. Open the [search help](#) and select the type of purchasing document that you want to use.

Search help for field Outline agreement

	From	To
Agreement

- Purchasing Documents per Cost Center
- Purchasing Documents per Vendor**
- Purchasing Documents for Material
- Purchasing Documents per Network

2. Enter search criteria, or leave all fields blank to find all documents in the selected category, then click **Search**.
3. Select the document that you want to use.
4. Click the **Continue**.

Note: You can only select an existing purchasing document when you first create the document. Once you have left this dialog box, you will not be able to open it again for this document.

Create a document without a purchasing document

If you do not want to use an existing purchasing document, complete the following steps.

- Leave the **Outline agreement** field empty and click **Continue**.

Enter account assignments

You enter account information for items on a line by line basis in the [document detail view](#). You can perform the following actions.

- enter a single account assignment
- distribute the item over several accounts based on a fixed quantity per account
- distribute the item over several accounts based on a percentage of the total per account

To enter account assignments, complete the following steps.

1. In the **Items** pane, select the item and click **Accounts**.

The **Accounts** pane is displayed below the line item where you can enter account information.

The screenshot shows the 'Accounts (3)' pane. At the top, there are buttons: 'Maintain entry templates', '+ New line', '* Delete', '+ Accounts', and '+ Texts'. Below these is a table with columns: 'Template', 'St', 'Item', 'Short text', 'Quantity', 'OUn', and 'Delivery'. The first row is selected, showing '00010' as the item and 'Sample item 1' as the short text, with a quantity of '12.000' and 'PC' as the OUn. Below this table is the 'Accounts (3)' section, which has buttons '+ New line' and '* Delete'. It contains a table with columns: 'Template', 'Quantity', 'Percent', 'G/L Acct', 'Cost Ctr', and 'Order'. There are two rows in this table, both with a quantity of '6.000' and a percent of '50.0'. The first row has '300000' as the G/L Acct and '2000' as the Cost Ctr. The second row has '400000' as the G/L Acct and '1000' as the Cost Ctr. At the bottom of the pane, there is another row in the main table showing '00020' as the item and 'Sample item 2' as the short text, with a quantity of '100.000' and 'PC' as the OUn.

2. In the **Template** field you can select an [entry template](#) that contains predefined fields, such as the G/L account or the cost center. When you select the template, the predefined fields are entered in your account assignment and you only have to fill in the missing information.
3. When you are finished assigning accounts, in the **Accounts** pane, click ☐ to collapse the pane.

Save a document

To save a document, complete the following step.

- When you have finished [entering data](#) in your document, on the **Actions** bar, click **Save**.

New documents that you have created appear in the **Drafts** section of the [Worklist](#). ReadSoft PROCESS DIRECTOR creates a document number the first time you save a document. Click the PROCESS DIRECTOR document number (**PD doc. no.**) in the [document overview list](#) to view or [edit](#) the document details.

Down Payments

ReadSoft PROCESS DIRECTOR for Down Payments allows users to create requests to get paid in advance. This request for a down payment is not necessarily an invoice or a document. When a corresponding invoice is later posted and paid, the paid down payment amount gets deducted from the invoice amount, and only the remaining amount then needs to be paid to the vendor.

To create a new down payment, complete the following steps.

1. [Create the document](#).
2. [Enter the header data](#).
3. [Save the document](#).

Create a down payment

To create a down payment, complete the following steps.

1. In the [Worklist](#), click the **Down Payments** category.
2. In the [document overview list](#), on the **Actions** bar, click **Create**.

Note: You can also create down payment requests from ReadSoft PROCESS DIRECTOR Accounts Payable. Refer to the *PROCESS DIRECTOR Accounts Payable User Guide* for more information.

Enter the header data

Enter the header data for a document in the fields displayed in the [document detail view](#). Depending on your system configuration and user rights, some fields may have been automatically filled by the system and some fields may be read-only.

Depending on the configuration, fields that require an entry and cannot be left blank may be highlighted.

Fields with the  button have search help available to assist you in finding the right value. See [Use search help](#) for more information.

Down Payments have only header data; they do not have line items because they typically have no balance.

In addition to supporting references to a purchase order number or item, Down Payments also require a target special G/L indicator. You need to fill in all the mandatory fields to create and [save](#) the Down Payment.

Save the document

To save a document, complete the following step.

- When you have finished [entering data](#) in your document, on the **Actions** toolbar, click **Save**.

Down Payments are [posted](#) using the batch input method in the F-47 transaction.

New documents that you have created appear in the **Drafts** section of the [Worklist](#). ReadSoft PROCESS DIRECTOR creates a document number the first time you save a document. Click the PROCESS DIRECTOR document number (**PD doc. no.**) in the [document overview list](#) to view or [edit](#) the document details.
